CAREER OBJECTIVE

Enthusiastic and detail-oriented Computer Applications graduate with skills in Full Stack Development, Web Development, IoT, REST APIs, Database Management, and Salesforce. Seeking an entry-level opportunity to apply technical skills, contribute to organizational growth, and develop professionally.

TECHNICAL SKILLS

Programming Languages: Python | Java | C | C++

Web Technologies: HTML5 | CSS3 | JavaScript

Frameworks & Libraries: React.js (Learning) | Node.js (Learning)

Full Stack Development: MERN Stack (Learning)

Database: SQL | MySQL

Version Control: Git | GitHub

Cloud & DevOps: AWS (Learning) | Docker (Learning) | Kubernetes (Learning) | DevOps (Learning)

Software Development: Object-Oriented Programming (OOP) | Data Structures & Algorithms | REST APIs | Software Development Life Cycle (SDLC) | Database Management Systems (DBMS)

CRM Platforms: Salesforce CRM | Apex | SOQL | Lightning App Builder | Salesforce Flow

IoT & Embedded Systems: NodeMCU (ESP8266) | Arduino IDE | Embedded Systems | IoT Development

Operating Systems: Linux | Windows

Networking: Computer Networks | TCP/IP

Tools: Visual Studio Code | Eclipse IDE | Microsoft Office Suite

EDUCATION

Master of Business Administration (MBA) 2026 – 2028

Manipal University, Jaipur (In Progress)

Bachelor of Computer Applications (BCA) 2023 – 2026

St. Joseph's College for Women, Tirupur (Bharathiar University)

PROJECTS

Project Number - 01

Laser Beam Security Grid – IoT

December 2025 – March 2026

- Designed and developed an IoT-based laser beam security system for real-time intrusion detection.
- Integrated a laser transmitter and LDR sensor with NodeMCU (ESP8266) to continuously monitor beam interruptions.
- Programmed the microcontroller using Arduino IDE to detect unauthorized access and trigger an instant buzzer alarm.

Tirupur, Tamil Nadu, India | +91 8870945653 | nashimaroshan2005@gmail.com

[LinkedIn Profile](#) | [Github Profile](#)

- Utilized Wi-Fi connectivity for remote monitoring and future integration with notification platforms.
- Implemented sensor-based automation to improve the reliability and efficiency of the security system.
- Applied embedded systems, IoT, and hardware integration concepts to develop a cost-effective security solution suitable for homes, offices, and restricted areas.

Technologies: *IoT, Embedded Systems, NodeMCU (ESP8266), Arduino IDE, Sensor Integration, Hardware Interfacing, Problem Solving, WiFi Communication, Security Systems.*

Project Number – 02

Lease Management System | Salesforce CRM

June 2025 – October 2025

- Developed a Salesforce-based Lease Management System to streamline property leasing operations, including tenant management, lease agreements, payment tracking, and automated communication.
- Implemented Salesforce Flows, Validation Rules, Approval Processes, Apex Triggers, and Scheduled Apex to automate business processes and improve data accuracy.
- Built custom objects for Property, Tenant, Lease, and Payment while integrating email notifications and workflow automation to enhance operational efficiency.

Technologies: *Salesforce CRM, Apex, SOQL, Lightning App Builder, Salesforce Flow, Validation Rules, Approval Process, Scheduled Apex.*

Project Number – 03

Guardian Care Autonomous Safety Network – IoT

- Developed an IoT-based security system for monitoring restricted areas.
- Used PIR sensor and HC-SR04 ultrasonic sensor to detect movement and measure distance.
- Integrated NodeMCU (ESP8266) for processing sensor data and Wi-Fi connectivity.
- Implemented buzzer and LED alerts for immediate security notifications.
- Designed the system for automated, real-time safety monitoring.
- **Technologies:** *IoT, Embedded Systems, NodeMCU (ESP8266), PIR Sensor, HC-SR04 Ultrasonic Sensor, Arduino IDE, Embedded C, Wi-Fi/IoT, Buzzer & LED*

Project Number – 04

Automatic Irrigation System Using Rain Sensor and Soil Moisture Sensor

- Developed an IoT-based system to automate plant irrigation based on soil moisture levels.
- Integrated soil moisture and rain sensors with a NodeMCU microcontroller.
- Used a relay module to control the water pump, reducing water wastage and preventing over-irrigation.

Technologies: *NodeMCU, IoT, Sensors, Blynk.*

Project Number – 05

Elite exhaust care- LPG Leakage and Smoke Detection Safety System

- Designed and developed an IoT-based Smart Kitchen Safety Monitoring System to enhance household safety by continuously monitoring hazardous conditions such as LPG gas leakage, fire, smoke, and abnormal temperature levels.
- The system utilizes embedded sensors to detect potential hazards and immediately alerts users through a buzzer and cloud-based notifications.
- Real-time sensor data is transmitted via Wi-Fi for remote monitoring, enabling quick response to emergency situations and reducing the risk of accidents.

Technologies: ESP3266 | Embedded C | Micro Python | MQ-2 Gas Sensor | Flame Sensor | Temperature Sensor | Buzzer | Wi-Fi, Blynk | Firebase | Arduino IDE.

Project Number – 06

MP3 Tag Reader and Editor [Self-Directed Project]

- Project Brief Developed a command-line MP3 Tag Reader and Editor application to read and modify ID3 metadata from MP3 files.
- The application supports viewing information such as song title, artist, album, year, track number, and genre, along with editing selected metadata fields using command-line arguments.
- Implemented binary file handling to read, modify, and preserve MP3 metadata.

Technologies: C Programming | Structures | File Handling | Pointers | String Handling | Bitwise Operations Command Line Arguments | ID3 Metadata | Binary File Handling Key Challenges & Learnings /Implemented ID3 tag validation and metadata extraction from MP3 files using binary file handling techniques. /Used structures and pointers to organize MP3 metadata such as title, artist, album, year, and genre efficiently. /Implemented metadata editing by identifying specific ID3 frames and replacing their contents while preserving the remaining MP3 data. / Gained practical experience in file pointers, binary data processing, bitwise operations, command-line arguments, and debugging file-based applications.

Project Number: 07

Image Steganography Using LSB Encoding & Decoding [Self-Directed Project]

- Project Brief Built an Image Steganography application that enables secure hiding and retrieval of text messages inside BMP image files using the Least Significant Bit (LSB) algorithm.
- Implemented efficient encoding and mechanisms to preserve image integrity while ensuring accurate extraction of the embedded information.

Technologies : Advanced C Programming | File Handling | Bitwise Operations | Pointers | Structures | Functions | Command Line Arguments Key Challenges & Learnings /Implemented the LSB encoding and decoding algorithm to securely embed and extract secret data from BMP image files. /Gained a strong understanding of BMP file structure, image headers, and binary file manipulation through practical implementation. /Overcame challenges in performing bitwise operations while maintaining the integrity and visual quality of the original image. /Improved knowledge of modular programming, file handling, debugging, and command-line application development in C.

Project Number: 08

Address Book Management System [Self-Directed Project]

- Project Brief Built a command-line Address Book application for efficient contact management with features such as add, search, edit, delete, display, save, and load operations.
- Utilized file handling to store contact information permanently, enabling data retrieval across multiple program executions.

Technologies : *Advanced C Programming | Structures | File Handling | Functions | Pointers | String Handling | Command Line Interface (CLI) Key Challenges & Learnings | Designed a structured contact management system using C structures to organize and store user information efficiently. Implemented file handling techniques to save and retrieve contact records, ensuring data persistence between program executions. Developed search, edit, and delete functionalities using string manipulation, improving logical thinking and problem - solving skills. Gained practical experience in modular programming, input validation, debugging, and building menu- driven applications.*

Project Number: 09

Ecommerce API Development

- Developed backend APIs for an e-commerce platform as part of Python Stack Development training.
- Implemented core functionalities to support product management and streamlined data handling.

INTERNSHIP & TRAINING

Nobel Software Solutions, Tirupur | Full Stack Development Trainee

May 2026 – Present

- Currently undergoing an intensive Full Stack Development training program at Noble Software Solutions, Tirupur
- Gaining hands-on experience in HTML, CSS, JavaScript, React.js, Node.js, Express.js, MySQL, JSON, REST APIs, Git, and modern web application development.
- Learning front-end and back-end development, database management, API integration, web application deployment, and full-stack project development using industry-standard tools and best practices. Developing responsive, scalable, and database-driven web applications through real-world projects.

Nobel Software Solutions, Tirupur

May 2025 – July 2025

Course: Python Stack Development | Project: Ecommerce API Development

- Completed hands-on training in Python Stack Development, covering server-side scripting, REST API design, and database integration.
- Built and tested backend REST API modules for product listing, cart management, and order processing on an Ecommerce platform.
- Worked with MySQL for schema design and data handling, and used Git/GitHub for version control during development.
- Gained practical exposure to the Software Development Life Cycle (SDLC), debugging, and API testing under mentor guidance.

CORE COMPETENCIES

- IoT & Embedded Systems
- Software Testing & Debugging
- Problem Solving
- Analytical Thinking
- Team Collaboration
- Communication Skills
- Time Management
- Adaptability & Continuous Learning

LANGUAGES

English | Tamil | Urdu | Hindi

ADDITIONAL ACHIEVEMENTS

- Published and presented a research paper titled "How API Works in Today's World" as an author at an International Conference held at A.V.P College, Tirupur, covering the role, architecture, and real-world applications of APIs in modern software systems.
